LED Application Guide

The following application guide has been put together based on actual testing. It covers VW mk2-mk4, Corrado and Audi TT. The mk5 will be tested shortly. For each model we have tested our standard LEDs and High Intensity LEDs in all possible lights. We are still missing some lights and will test them as soon as possible.

Although we have tested these locations our application guide cannot be considered 100% accurate. Occasionally VW will randomly change a specific light for no apparent reason. When we know of a location with multiple bulb fitments it will be specified. If you are unsure please remove the light and verify the size before ordering.

Will these LEDs fit my _____?

We don't know! It's impossible for us to know the fitments of every vehicle. However, it's quite easy for you to figure out what bulbs your vehicle needs. Your first step is removing the bulbs to take a look. There are basically three types of bulbs used in the interior and small exterior lamps on most vehicles - wedge type, fuse style, and push & turn style. Please visit each of our LED pages for fitment details pertaining to each type of base. If in doubt, please email pictures of your bulbs to sales@42draftdesigns.com. If we can't see them we can't figure out what they are!

For more LED related questions please browse our FAQ located at www.42draftdesigns.com/faq.htm

****Check local laws before replacing exterior lights with any color besides white****

VW mk4 Jetta, Golf, GTI 1995.5 - 2005

Application	LED replacement	High Intensity Fitment	Notes
